

Build Your First Tool in Agent Mode

Session 1 • Practical Assignment

Instructions:

- Watch Video 3 (Claude Code Setup) completely
- Install Cursor, create API key, connect Claude
- Build a tool using Agent mode and submit

Assignment:

Build one practical tool using Cursor's Agent mode and describe your experience.

Pick ONE: (A) A script that processes data (read CSV, filter, calculate stats, save), (B) A script that automates a weekly task, or (C) Any tool solving a real problem in your workflow.

Use Agent mode by giving it your goal and letting it execute. Submit: (1) Your working code, (2) 1-2 screenshots showing Agent mode, (3) 300-word reflection: What did Agent mode do well? Where did you intervene? Would you trust it to run alone? What would you build next?

Submit your response by the deadline.
